

**Continuous Comex Gold** **March 3, 2009**  
**as of pit session close 12:30 PM CST** **Weekly chart**

*Support in the zone indicated above failed as shorts were able to push prices low enough to reach the sell stops under \$920.*

*The rising 10 week moving average is holding prices although it looks a bit tenuous.*

*\$890 looks pretty solid which is the level that served to hold prices from advancing early this year. It also is a Fib retracement level....*
