

### Comex Continuous Gold Hourly Chart

**The bullion banks continue to sell with reckless abandon as they fight the upward progress in gold and do their master's bidding.**

**The price pattern continues very similar to the July 15- July 20 consolidation trade although this time around, the breakout through resistance was shoved back.**

**I want to see sustained trade above the \$954- \$956 level to set up a challenge of \$962- \$966**

*Should now serve as solid support*

*Bullion bank price capping*

*Hourly RSI is still friendly trading above the 40 level but needs to see a move higher*
